

PHILIPPINE RISE

THE LAND OF OIL & GAS

September 12, 2022

DREAMSCAPE HOLDINGS HASHIMOTO PHILIPPINES INC.

[REDACTED]

Attention: Dr. Bertito D. Hashimoto
President & CEO

Greetings Dr. Hashimoto,

Please be advised, that my office have received your request for an assessment concerning the Liquefied Natural Gas (LNG) deposits located out the shoreline of Aurora, Province of Isabela, in the West Philippine Sea.

I, the undersigned is the owner of the Mr. E. Applied Environmental Sciences Consulting Firm, furthermore over the past 2.5 months, we have assessed the Philippine Rise in collaboration with Yolanda Aguilar (Ph.D.), Acting Chief of the Marine Geological Survey Division of the Mines and Geosciences Bureau, Philippine Rise should be explored for its mineral potential, apart from its rich biodiversity, located within the Pacific Ring of Fire, there is a big possibility of finding metallic minerals and deep pocket of methane from gas hydrate deposit considered to be Liquefied Natural Gas (LNG) that shall require further geological survey in the area, which is almost the size of Luzon and the Visayas combined.

Our Assessment per your request renders our calculations to quantify the size of LNG (Methane) to be located in deep pockets for reserves to total up to 13 million hectares in size, to conclude the purity of LNG up to 86-90%. Furthermore, the LNG (a natural abundance) and sedimentations of other metallic minerals in the area, including sulphides like gold and copper be gold, sulfate at its deepest depth and considered a game changer in the fossil fuel (clean green energy) industry.

Moreover, to update my data, my company shall required further research to conclude in-depth studies as geological survey for exploration of LNG, in the West Philippine Sea, please contact my office for a formal survey with the scientific and technical data. Please see my attached company profile and other related services offered.

Respectfully yours,

RUBEN ("Mr. E") ESTUDILLO

Owner

Managing Director, Chief Environmental Consultant, Chief Scientist, Oceanographer
MSC in Marine Biology, Oceanography Surveyor, Underwater Archaeological Surveyor
